

ERD's :-

1.)

Career Feature:-

Many to many relation

Justification :-

In this feature I am using two tables namely career candidate and career job which share a many to many relationship.

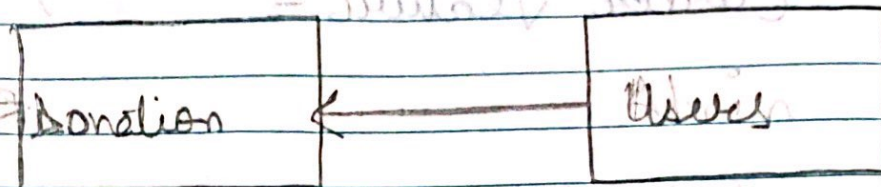

As one job could be applied by any number of candidates and also one candidate can apply for many different jobs.

eg:-

Suppose we have a registered nurse with 10 year experience, now she could apply for any department job in a hospital as it could be in pediatric ward or trauma ward wherever need be, so she can apply for more than one position. Similarly for a job there are huge number of application from different candidates.

2.)

Donation Feature :-

One (Users) to many (Donations)

Justification :-

Donation could be made by any person whosever is interested in making clarity for the hospital

Relation between donation and users (user could be any person) is one user to many donation as one user can make any number of donations throughout their lifetime and admin can access every donation

eg:-

~~A person named Mary is a doctor~~

example for donation justification:-

a woman named mary who works for an IT firm can make many donations during her lifetime as per her convenience.

And that particular donation will always have mary name on it. only and never for any other donor.
