

Volunteer Form - Version 1.0 (Tianyi Zhang)

Narrative Description

User Story

- A user can apply directly online, with this feature. The user is asked to login before apply for a volunteer position, so that he or she does not need to fill up a personal information again. If the user does not have an account, the page would link to a registration feature.
It will be much more convenient for the students who live far away. The user does not have to go there to apply for volunteers. For younger generation today, many things are used to searching for solutions online, such as applying for volunteers. The website is full of hospital consultations, but it misses a volunteer form. And if this appointment system can increase the number of volunteers, it will certainly be a good thing for the hospital.
A Volunteer form is important to your website because nowadays younger people are more likely to apply for a volunteer job online. With a good volunteer form, there would be more students and young generations coming as volunteers.

Database Schema

FYI:

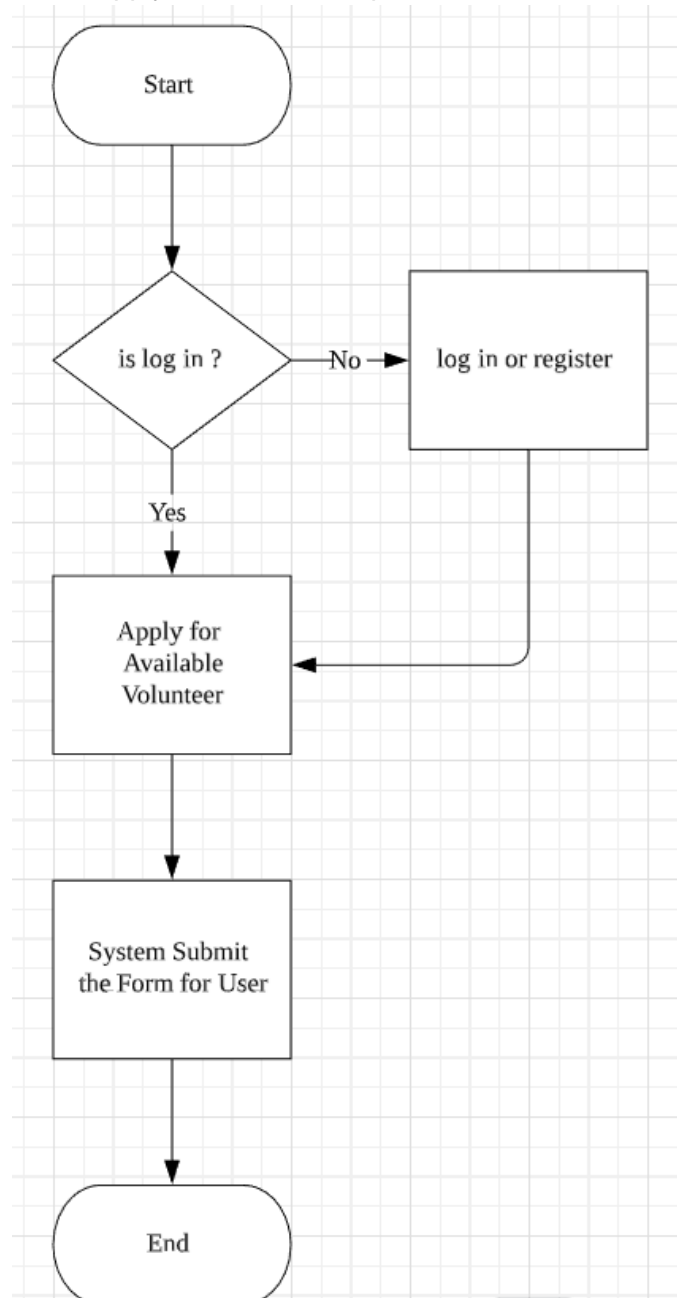

Required Position: the required number of volunteers for one position.

Applied Position: the number volunteers that are already applied for one position.

Booking Appointments - Version 1.0 (Tianyi ZHang)

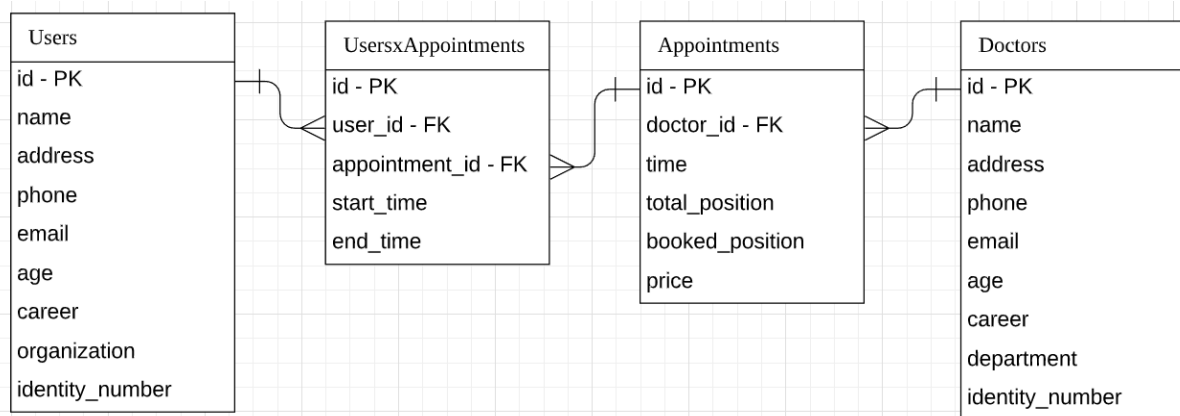

Narrative Description

User Story

- A user can book an appointment without making a phone call by using the website. In this way, he or she can book an appointment when not convenient to make a phone call.

A Booking Appointments form is important to your website because there are some people who do not like to talk to strangers. There might also be some kinds of situations when people are not able to make a phone call. With a Booking Appointments form, there would be more relaxing for these kinds of people.
